Munters Protect - the barrier against corrosion

A **revolution** has started in Munters. From now on all metal fans from our factory in Italy will be manufactured in the new coated material **Munters Protect**, featuring the best corrosion resistance performance available on the market.

- Munters now offers the best protection to withstand harsh environments as in poultry production or in greenhouses and dairy barns, where high humidity, pH levels and aggressive chemicals from manure or disinfectants are present.
- **3 year warranty** is offered on the material against corrosion on fan housing and shutter blades (excluded swine applications)

All in all, this revolution gives a **longer product life-cycle**, **less maintenance** on fans, **reduced total cost of ownership** and **less environmental impact**.

After a long test period at farm sites, we are confident to say all of the above. Read a testimony from one of our happy customers.

In Tecnoesse's test facilities in Brazil, Munters Protect fans have now been running for more than three years. Here is a quote from the Farm Manager:

"Cycle after cycle, if properly washed at the end of each cycle, the fans practically have no signs of the time. The fan made with Munters Protect definitely has combined the two aspects: efficiency and durability".
