Hog Control Package

Profitable, efficient swine farms involve two factors: Climate control systems responsive to even minor changes as well as a communication system that provides critical data in real time. Why? No one stays at his farm 24 hours a day; however, changes in conditions or problems can arise at anytime. A change doesn't have to be major; even a minor change in the weather can affect production. A controller that can handle these problems and a communication system capable of informing you about what is going on can reduce expenses and improve production results. Proper, timely information at your fingertips means dealing with mission-critical issues rather than wasting time on non-productive tasks.

Munters Corporation, Business Area AgHort

Hogs Don't Rest, But Farmers Do

A problem can occur at any time and can be costly if not responded to quickly. Small variations in climate can lead to poor production results. The Hog Control Package allows farmers to monitor their barns around the clock and make adjustments whenever necessary, from wherever they are.

HOG CONTROL PACKAGE INCLUDES:

Choice of Controllers:

ELEMENT

Element is a stand alone controller for swine barns. Employing a new hardware package, all programming and relay connections can be carried out from this unit. Element ensures optimal climatic conditions and real time alarms, allowing control of multiple houses from a remote location. Element's cutting edge web application gives full monitoring and control capabilities, via the Cloud or web-based software.

FARM PREMIUM P XL

The Farm Premium P XL is a user-friendly and easy-to-program Climate Controller that manages all aspects in the livestock house: climate, temperature, feed, weighing and all types of ventilation, generating exceptional business results - producing larger and healthier animals, while saving both energy and feed.

COMM-BOX

Comm-Box provides you with complete access to your Munters controllers, including monitoring and control capabilities, from any device, anywhere. When used in combination with the Farm Guard, Munters Comm-Box also provides 24/7 alarms and events monitoring keeping you updated in real time to what is happening on your farm.

FARM GUARD

Farm Guard is a remote communication and alarm system used to monitor Munters controllers and accessories. The Farm Guard sends out alarms and data 24/7, enabling you to deal with any problem on the spot. On-site communication can occur via any combination of wired or wireless networks, while off-site communication can be via land-line, cellular, or internet connection (using the Comm-Box).

ROTNET WEB

RotemNet Web provides a large range of benefits, at several different levels. For anyone involved in managing a farm or groups of farms RotemNet Web keeps you connected to your data. You can configure the RotemNet Web app to display exactly the data that you require. One account gives you access to every farm. At the same time, the farm owner can define different permission levels for each user.
