Product sheet Communication Package

Network Management

- Cloud-based access to controllers: multiple, simultaneous users have network access
- Multiple communication pathways
- Built-in internet and cellular connectivity
- Local communication via wired or wireless communication
- Status reports provide critical information on house functions and animal statistics

789

Web Application

- Full control over your farm controllers
- Overview of houses activities
- User customized dashboard
- Displays comparison of houses main performance parameters

Smartphone Application

- Fully enabled mobile control device
- Consistent look and feel with Web Application
- Supports push notification
- Enables control over multiple farms from a single login

Stay Connected, Stay on Top

Munters Communication Package provides a range of products designed to enable anyone having a PC or mobile device, along with access to the cloud, to manage his farms anytime, anywhere.

Communicator 2.0 provides you with complete access to your Munters controllers, including monitoring and control capabilities, from any device, anywhere. In addition, 24/7 alarms and events monitoring keep you updated in real time on what is happening in your farm. From one computer, tablet, or smartphone, you can manage an entire network.

For users who require complete web access capabilities without alarms and events monitoring, CommBox provides a cost-effective alternative. CommBox supports all access and data functionality provided by Communicator 2.0, both locally and remotely.

In addition, CommBox can act as an add-on for users wanting to add web-access to legacy Communicator units.
