

Munters EMS 50-36-30

Air circulation fans

The EMS series is one of the first air circulators families designed and produced by Munters, widely used in poultry (broiler, layer) and dairy ventilation systems.

Benefits

- Superior durability with Munters Protect coating
- Easy installation and maintenance
- High airflow capacity
- Reduced energy consumption, saving up to 50% of electricity with the EMS 50 E-line version
- EMS 50 features high-efficiency motor, in accordance with EU regulations

EMS50 E-line

EMS 50-36-30 are the ideal air circulators whenever high airflow capacity is required, thanks to their unique propeller design that guarantees full efficiency and reliability.

The housing, conveyor and 6-blade propeller made in Munters Protect coated steel ensure extra strength and resistance against corrosion. The die-cast aluminum central hub and v-belt pulley enhance durability and reliability further.

The low-speed, belt-drive system helps reduce energy consumption and noise levels, providing a comfortable working environment for animals and operators.

The EMS 50 E-line version reduces power consumption by up to 50% compared to the same fan with AC motor, while enabling speed regulation.

EMS air circulators feature threaded bushes on the side panels that allow the farmer to easily hang them from the ceiling, and a welded wire mesh divided into two sections for effortless maintenance.

As the market leader in ventilation solutions for more than 60 years, Munters guarantees quality and is ISO 9001 certified.

EMS36

Proudly manufactured with 100% renewable energy in our plants in Italy
