Rotem Pro

Climate Control Taken to a New Level

The Rotem Pro, Munters Next Generation in Climate Control, provides poultry and swine farmers with vastly expanded capabilities, including climate control, feed & water management, and more. Housed in a user-friendly, easy to install container, the Rotem Pro is suitable for operations of any size, from standard to mega farms. Rotem Pro provides a cost effective alternative to the controllers featuring a touch screen.

The unit supports up to 100 heavy duty relays, comes equipped with a feature rich software package, an ARM CPU, SD card reader, smart override switches, independent heat zones, and much, much more.

The Pro's enclosure is designed to facilitate installation and maintenance, while a switch guard door keeps toggle switches securely in place.

Safely remotely manage your farm with the intuitive RotemNet Web software, the web based software that allows remote control, regardless the device (smart-phone, tablet, or desktop computer).

Features

- Extra large screen is easy to use, simplifies configuration, control and farm monitoring
- Remote access via Web, Cloud, smart-phone and real time alarms
- Improved software capabilities support an unlimited number of devices and scales
- New heavy duty enclosure simplifies installation and maintenance
- Multi-language support

A world leading supplier of climate solutions for the future

Munters is a global leader in climate solutions for mission-critical processes. We offer innovative, efficient and sustainable solutions for customers in industries where controlling indoor humidity, temperature and energy efficiency is mission-critical.
