

Product sheet
PigRealTime

- Controllers capable of managing a growth cycle from start to finish.
- Different controllers provide varying levels of management and functionality.
- Reduces your energy costs, ensures the animals get the air they need, and maintains peak animal health.
- Alarms and events information sent to you and your teams in real time on any web connected device: PC, tablet, or smartphone with a unified interface.

PigRealTime

Profitable, efficient swine farms involve two factors: Climate control systems responsive to even minor changes as well as a communication system that provides critical data in real time. Why? No one stays at his farm 24 hours a day; however, changes in conditions or problems can arise at anytime. A change doesn't have to be major; even a minor change in the weather can affect production. A controller that can handle these problems and a communication system capable of informing you about what is going on can reduce expenses and improve production results. Proper, timely information at your fingertips means dealing with mission-critical issues rather than wasting time on non-productive tasks.

HOGS DON'T REST, BUT FARMERS DO

A problem can occur at any time and can be costly if not responded to quickly. Small variations in climate can lead to poor production results. The PigRealTime Package allows farmers to monitor their barns around the clock and make adjustments whenever necessary, from wherever they are.

PigRealTime PACKAGE INCLUDES:

> COMM-BOX and COMMUNICATOR

Comm-Box and Communicator Communication system. Comm-Box supplies complete web access to your controllers from any device with access to the Cloud, including mobile devices. Installed as an add-on to the Communicator, the two units provide a complete service package: Communicator supplies its proven alarms & events functionality while Comm-Box enables remote monitoring & control via the Web & Cloud.

> ROTEMNET WEB

RotemNet Web provides a large range of benefits, at several different levels. For anyone involved in managing a farm or groups of farms RotemNet Web keeps you connected to your data. You can configure the RotemNet Web App to display exactly the data that you require. One account gives you access to every farm. At the same time, the farm owner can define different permission levels for each user.

> ELEMENT

Element is a stand alone controller for swine barns. Employing a new hardware package, all programming and relay connections can be carried out from this unit. Element ensures optimal climatic conditions and real time alarms, allowing control of multiple houses from a remote location. Element's cutting edge web application gives full monitoring and control capabilities, via the Cloud or web-based software.

> SUPERGUARD and PIGUARD PLUS

An inclusive system, in which one smart central server, SuperGuard, controls high-performance Piguard Plus control units, installed in up to 10 different pig house rooms.

> AC-2000 CONTROLLERS

AC-2000 provides control over ventilation, air pressure, climate, feed and water, air quality factors such as CO2 or humidity levels, and more.
